What is Everglades Restoration?

The Everglades is recognized both nationally and internationally as one of the world's most unique natural and cultural resources. Encompassing nearly 18,000 square miles of the southern tip of the Florida peninsula the Everglades and the greater Everglades ecosystem (spanning from the Kissimmee River basin north of Lake Okeechobee all the way south to Florida Bay) are also the focus of the world's largest intergovernmental watershed restoration effort.

Western Everglades Restoration Project Workshop

South Florida Ecosystem Restoration Working Group Sponsored Workshop
Western Everglades Restoration Project

Please RSVP for the August 23rd workshop on the Western Everglades Restoration Project being conducted by the South Florida Ecosystem Restoration Working Group/Science Coordination Group. The purpose of the workshop is to engage the public in sharing knowledge and expanding and refining the existing knowledge base regarding historic conditions, existing conditions, water flow, landscape features, and restoration ideas for the project area.

Your RSVP will help us prepare sufficient materials for everyone's participation.

Please click here to RSVP

Tuesday, August 23rd, 2016
Time: 10:00 AM – 4:00 PM

John Boy Auditorium
1200 South W.C. Owen Avenue
Clewiston, Florida 33440
