Central Everglades Planning Project
Configuration Summary Sheet

Configuration Name: Establish a Unique and Descriptive Name of the Proposed Configuration.

RECREATIONAL FRIENDLY

Author of the Configuration: Identify the name of the Author that developed the Configuration during the exercise.

JOHN POSIER FULLTRACK CONSERVATION CLUB

NEWTON COOK UNITED WATERFOWLER

Configuration's General Description: This description should be able to convey the general aspects, elements, and general location of management measures in this configuration.

THIS PROPOSAL ALLOWS TRADITIONAL RECREATION USES WHILE STILL ACHIEVING SHEETFLOW

Management Measures: List the management measures used in the configuration (Pump Stations, Spreader Canals, Canal Plugs and Backfill).

CULVERTS UNDER LEVEES, GATED, PLUGS IN CANAL, USING EXISTING [illegible] USING EXISTING PUMPS

How Water Flows Through the Configuration: This description should identify the travel route of the water that the configuration will be managing. Identify where the water is coming from and where it goes. The Author should be able to generally describe how the water gets from the originating water source (for example, from EAA Storage and Treatment to Florida Bay) to the final destination of the water.

STARTS IN NORTH END OF 3A, WORKS IT WAY SOUTH TOWARDS 3B. GOES THROUGH SE CORNER OF ENP TO HYDRATE TAYLOR SLOUGH

Objectives: Identify and prioritize (rank) the specific CEPP Objectives that the configuration is intended to meet (use the list of Objectives as needed).

RECREATIONAL OPPORTUNITIES ARE STILL THERE
RESTORE SHEET FLOW
MINIMIZE ECONOMIC IMPACT TO THE FISHERY

Anticipated Benefits General Description: Identify why the Author chose the features in the configuration. List, prioritize and provide a general description of any benefits anticipated from the Proposed Configuration.

TO MAINTAIN RECREATIONAL USE OF THE AREA

Operating Assumptions General Description: List anything specifically that the Author wants relative to the operation of the configuration. Examples might be operational changes within Water Conservation Area 3, areas to focus pulse discharges or timing modifications to natural system.

KEEP WATER LEVELS BETWEEN 6 TO 15 INCHES IN THE SHEETFLOW AREA

Other Key Elements: List the main Considerations that have not been mentioned elsewhere on this Form. Examples may include potential Recreational Opportunities or Concerns.

WHILE RESTORING SHEETFLOW, FORESTRIN RECREATIONAL ACCESS AND USE
