

## Central Everglades Planning Project Configuration Summary Sheet

**Configuration Name:** Establish a Unique and Descriptive Name of the Proposed Configuration.

**Author of the Configuration:** Identify the name of the Author that developed the Configuration during the exercise.

Lisa Intarlandi  
Everglades Law Center

**Configuration's General Description:** This description should be able to convey the general aspects, elements, and general location of management measures in this configuration.

~~1~~ Maximize water quality treatment  
on Tolson

**Management Measures:** List the management measures used in the configuration (Deep Storage, Shallow Storage, STA, Restored Wetland, ASR).

STA / Flow Equalization Basin

**How Water Flows Through the Configuration:** This description should identify the travel route of the water that the configuration will be managing. Identify where the water is coming from and where it goes. The Author should be able to generally describe how the water gets from the originating water source (for example, Lake Okeechobee) to the final destination of the water.

Use Lake Okeechobee regulatory releases as source of water. Store / treat water w/ <sup>shallow</sup> flow equalization basin / STA on A1 + A2. Distribute through Holeyland / other STA's to provide clean water to the Everglades

**Objectives:** Identify and prioritize (rank) the specific CEPP Objectives that the configuration is intended to meet (use the list of Objectives as needed).

- ③ Increase native plant + animal species
- ② Improve habitat for birds
- ① Increase flow of freshwater for the Everglades
- ④ Improve habitat in Holeyland

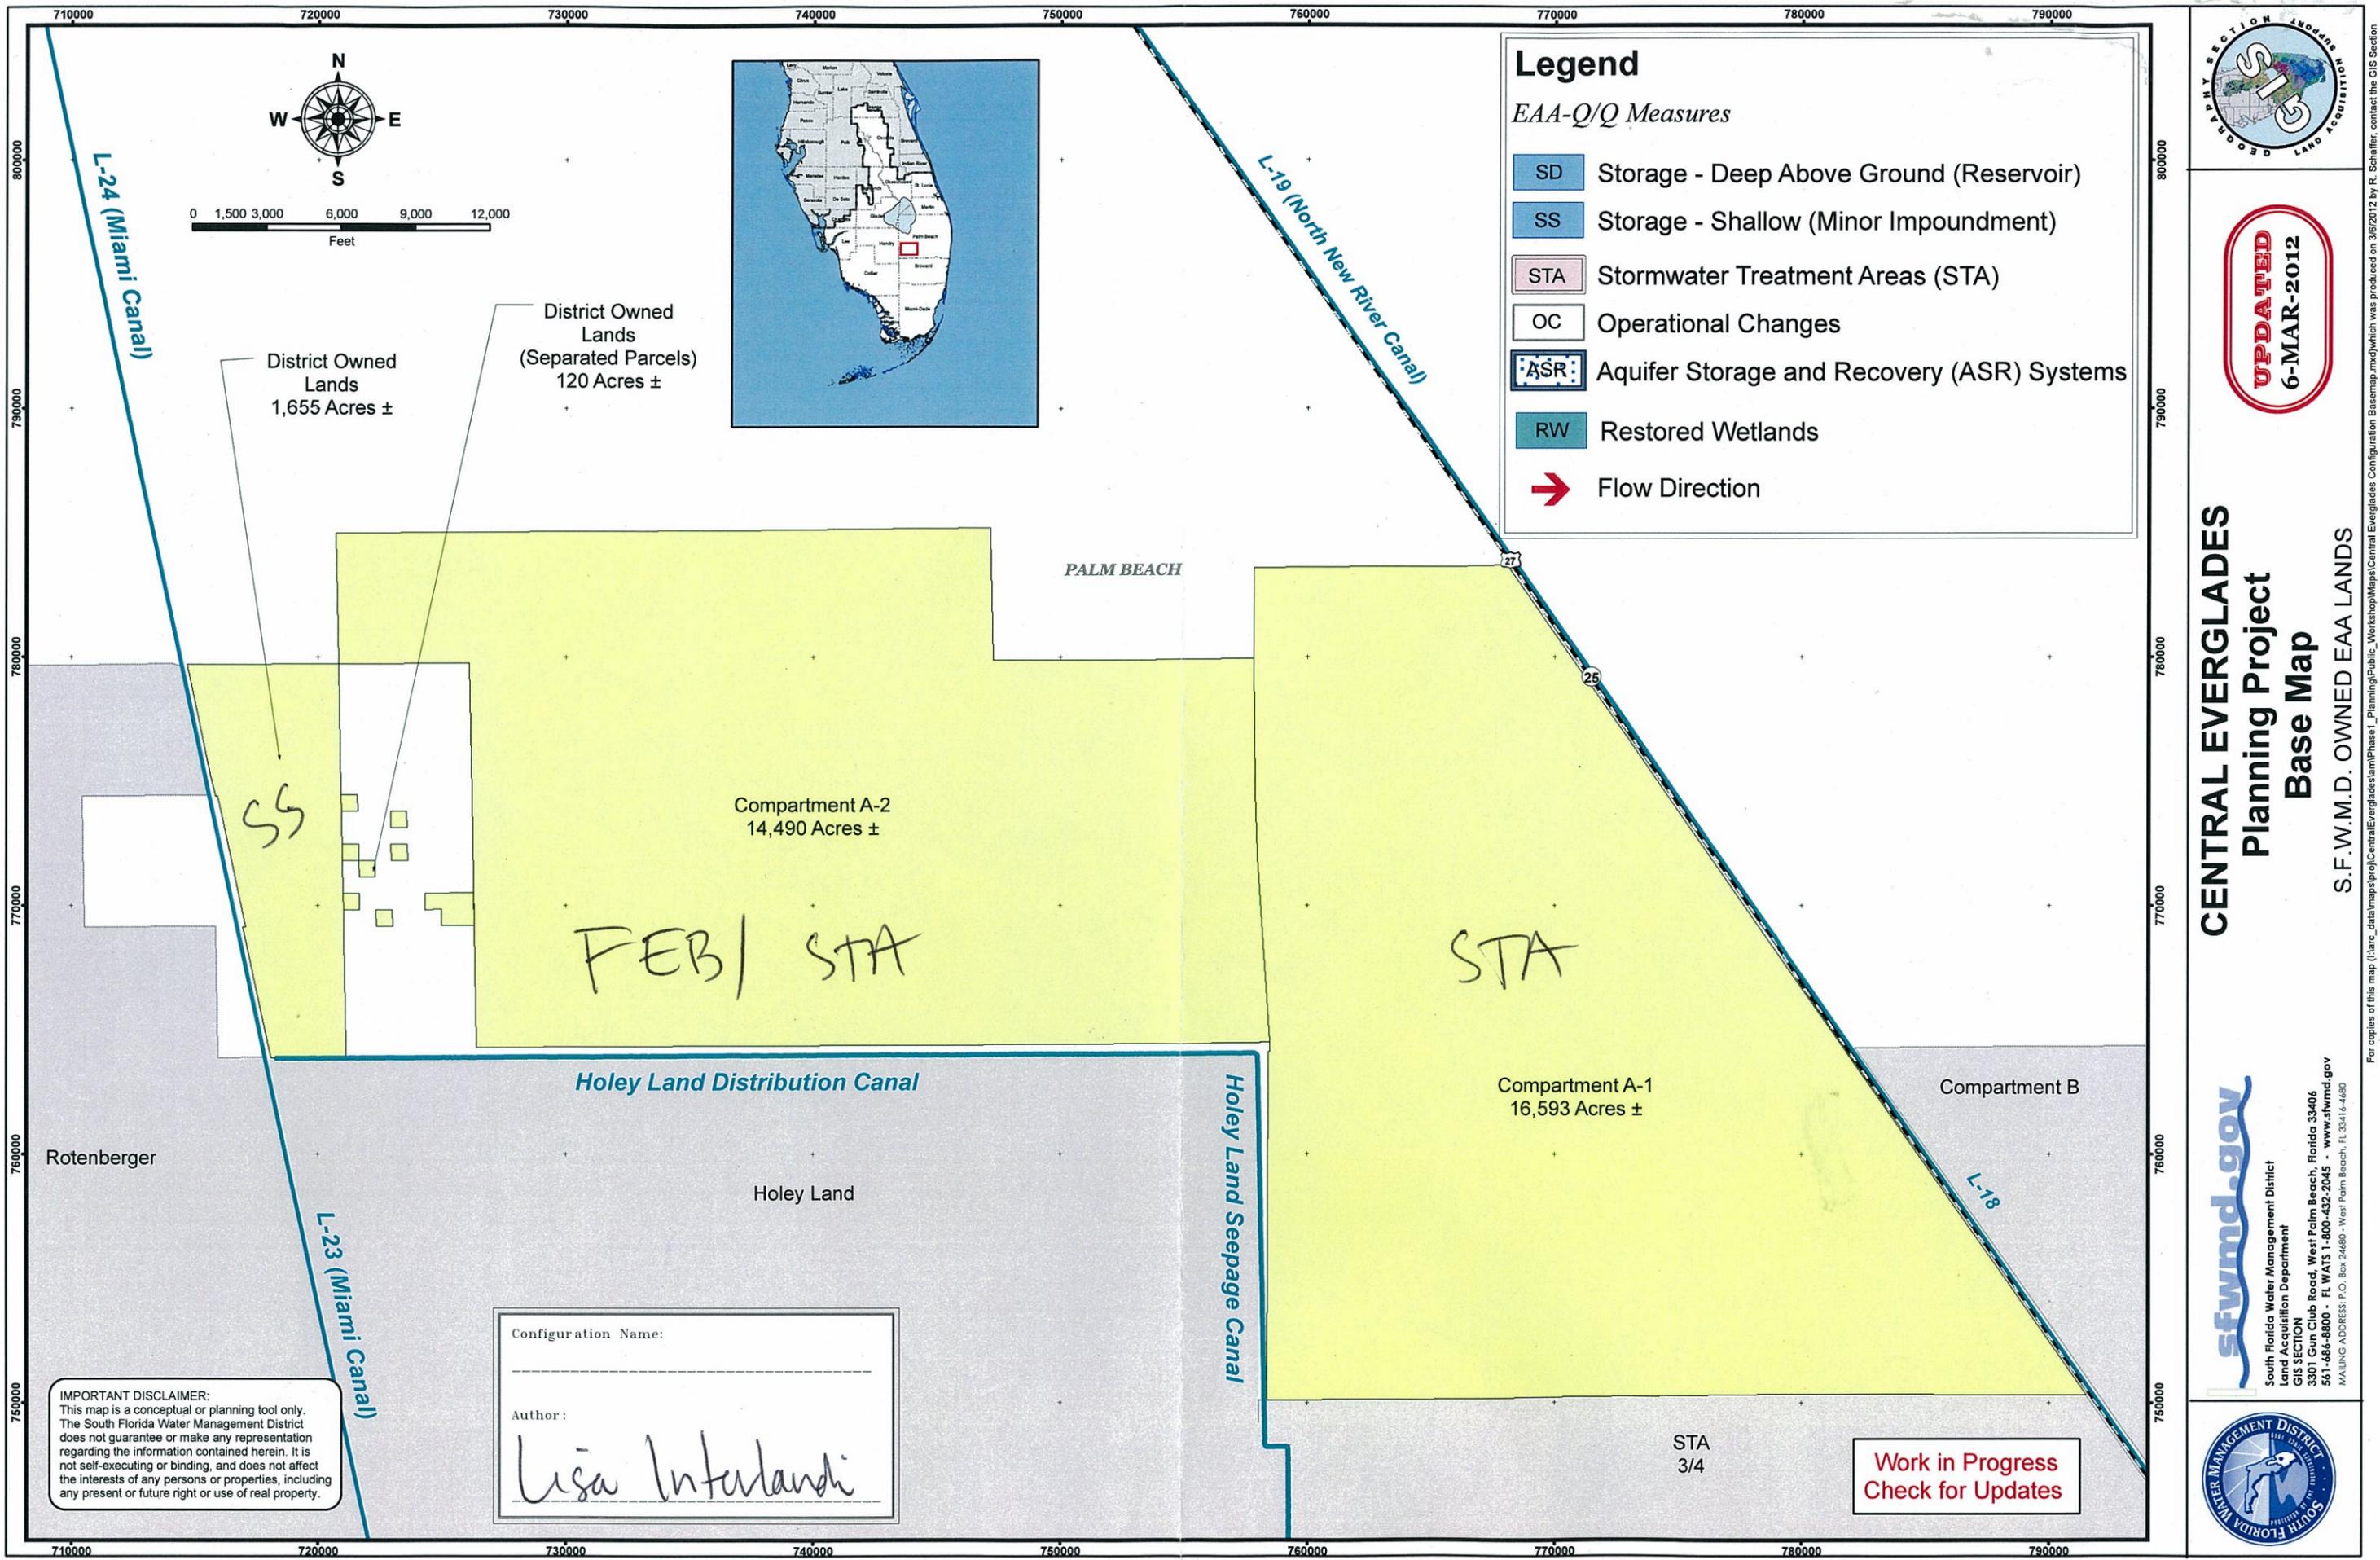

**Anticipated Benefits General Description:** Identify why the Author chose the features in the configuration. List, prioritize and provide a general description of any benefits anticipated from the Proposed Configuration.

**Operating Assumptions General Description:** List anything specifically that the Author wants relative to the operation of the configuration. Examples might be operational changes within the confines of the LO Schedule to maximize improvements to water supply or the environment, or both; specific high and low levels for Lake Okeechobee; maximize pulse discharges or modify timing to natural system; manage project features wet or dry.

utilize lake O regulatory releases, ~~to~~  
to be treated within A1 + A2 components  
to send additional clean water south.

Use talisman for treatment of water  
redirected as part of CEPP

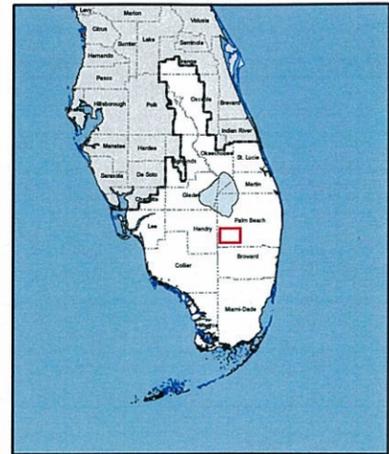

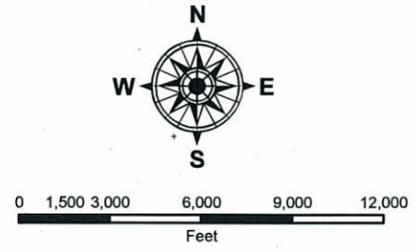

**Other Key Elements:** List the main Considerations that have not been mentioned elsewhere on this Form. Examples may include Water Supply in the Lake Okeechobee Service Area; deliver all available water to Florida Bay; Recreational Opportunities; etc.

### Legend

*EAA-Q/Q Measures*

- SD Storage - Deep Above Ground (Reservoir)
- SS Storage - Shallow (Minor Impoundment)
- STA Stormwater Treatment Areas (STA)
- OC Operational Changes
- ASR Aquifer Storage and Recovery (ASR) Systems
- RW Restored Wetlands
- ➔ Flow Direction
