

Central Everglades Planning Project Configuration Summary Sheet

Configuration Name: Establish a Unique and Descriptive Name of the Proposed Configuration. *Compartment A-1 Deep Water Reservoir*

Author of the Configuration: Identify the name of the Author that developed the Configuration during the exercise.

Rick Peerson Vice Pres. S.A.F.E.R. INC.

Configuration's General Description: This description should be able to convey the general aspects, elements, and general location of management measures in this configuration.

*16,593 Acres Deep Water Refuge
with 100' Littoral zones on the North, East, and
west sides. to promote a recreational fishery.
Boat Ramp on the S.E. cor. easy access from
US 27.*

Compartment A-2 - STA -

Management Measures: List the management measures used in the configuration (Deep Storage, Shallow Storage, STA, Restored Wetland, ASR).

Deep storage

How Water Flows Through the Configuration: This description should identify the travel route of the water that the configuration will be managing. Identify where the water is coming from and where it goes. The Author should be able to generally describe how the water gets from the originating water source (for example, Lake Okeechobee) to the final destination of the water.

Water pumped from Deep water Storage into STA on west side of project

Objectives: Identify and prioritize (rank) the specific CEPP Objectives that the configuration is intended to meet (use the list of Objectives as needed).

- ① Water Storage
- ② Added recreational opportunities.
- ③ positive economic impact to surrounding areas.

Anticipated Benefits General Description: Identify why the Author chose the features in the configuration. List, prioritize and provide a general description of any benefits anticipated from the Proposed Configuration.

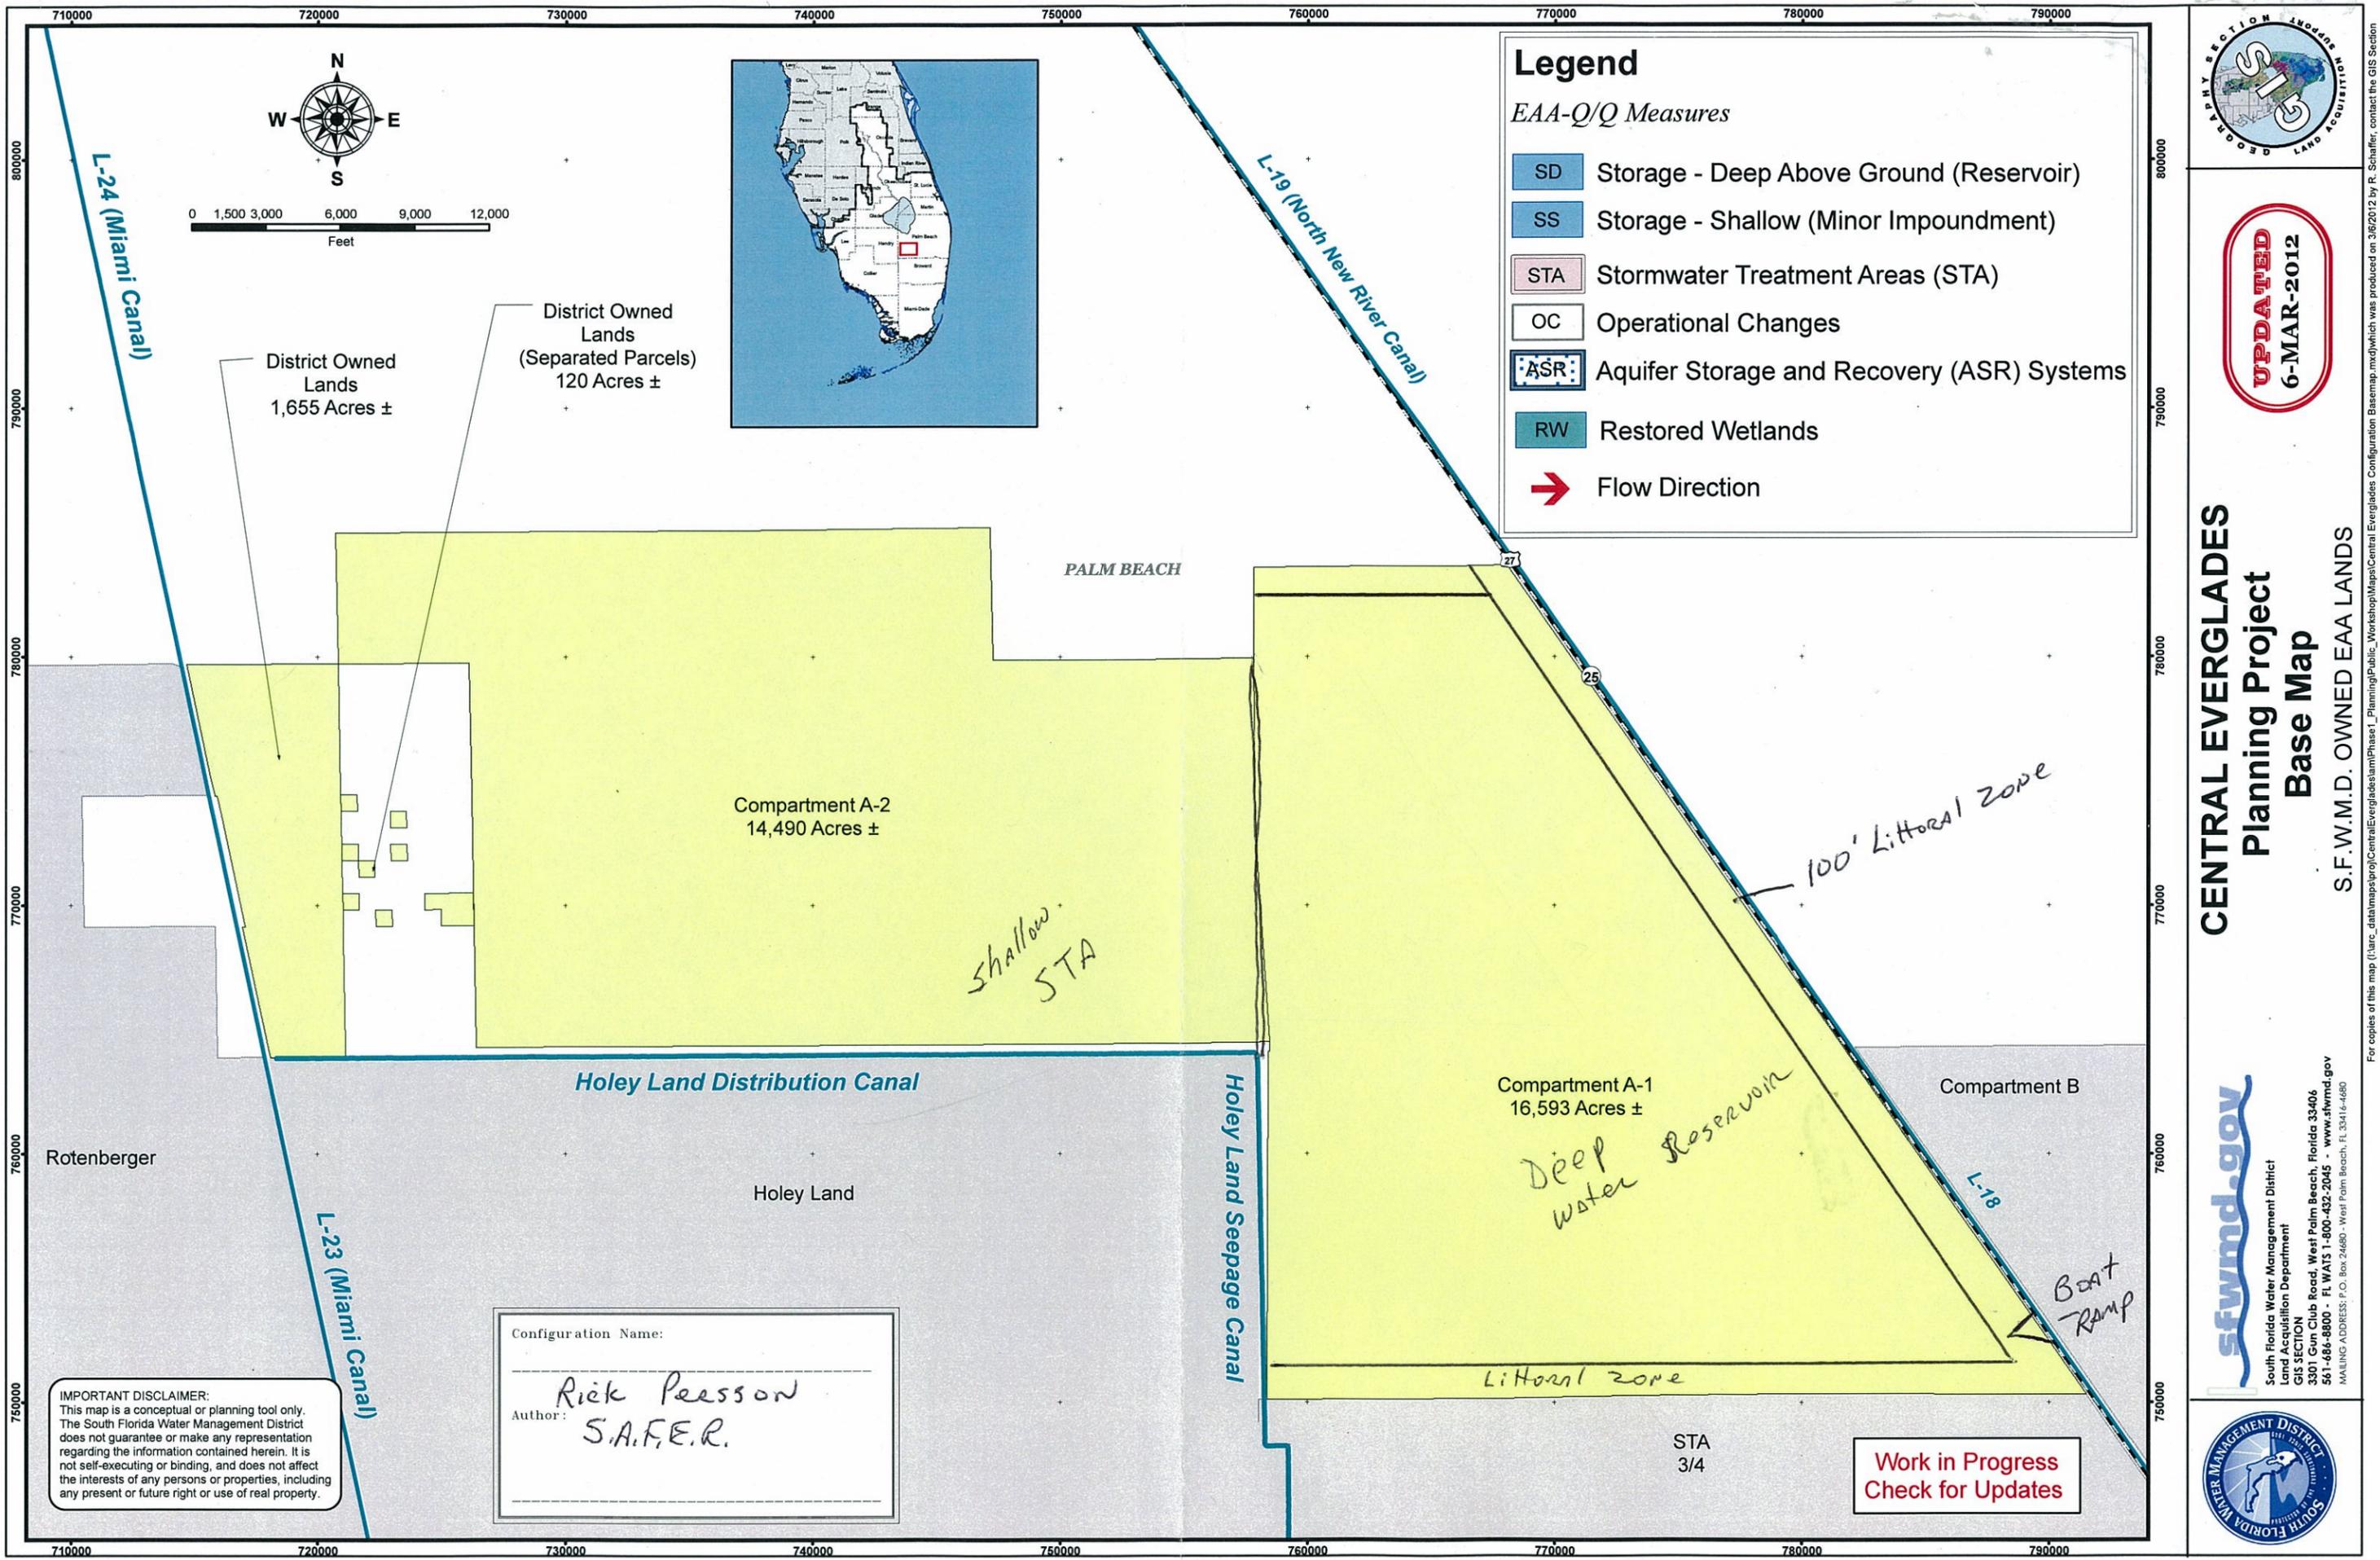

- ① increased recreational opportunities
- ② positive economic impact to surrounding areas.

Operating Assumptions General Description: List anything specifically that the Author wants relative to the operation of the configuration. Examples might be operational changes within the confines of the LO Schedule to maximize improvements to water supply or the environment, or both; specific high and low levels for Lake Okeechobee; maximize pulse discharges or modify timing to natural system; manage project features wet or dry.

water levels dictated by need -

Other Key Elements: List the main Considerations that have not been mentioned elsewhere on this Form. Examples may include Water Supply in the Lake Okeechobee Service Area; deliver all available water to Florida Bay; Recreational Opportunities; etc.

① will lessen the need for impacts on Lake Okeechobee levels
