Central Everglades Planning Project
Configuration Summary Sheet

Configuration Name: Establish a Unique and Descriptive Name of the Proposed Configuration.

Keep it Natural

Author of the Configuration: Identify the name of the Author that developed the Configuration during the exercise.

Group 7 Table Joan Bausch Leticia Diaz

Inger Hansen

Tom Sanez Dawn Shireffs

Configuration's General Description: This description should be able to convey the general aspects, elements, and general location of management measures in this configuration.

Shallow Storage + STAs primarily

some R.W. on west to feed ~~to~~ west toley Land

Management Measures: List the management measures used in the configuration (Deep Storage, Shallow Storage, STA, Restored Wetland, ASR).

SS
STA
RW

How Water Flows Through the Configuration: This description should identify the travel route of the water that the configuration will be managing. Identify where the water is coming from and where it goes. The Author should be able to generally describe how the water gets from the originating water source (for example, Lake Okeechobee) to the final destination of the water.

water from Miami Canal to pump G372
some water to RW
rest to pull in to new canal on west A2
with New pump midway A2
A2 divided SS North across to A1 north SS
SS distributed South to STAs
A2 + A1
STA west can go into Holey land and to canal
G370 pumps to SS with finger canal - distributed to STA
flowing south

Objectives: Identify and prioritize (rank) the specific CEPP Objectives that the configuration is intended to meet (use the list of Objectives as needed).

Restore hydroperiod and provide dry season flows
Reduce high water discharge out estuaries
Restore more natural water levels

Anticipated Benefits General Description: Identify why the Author chose the features in the configuration. List, prioritize and provide a general description of any benefits anticipated from the Proposed Configuration.

Operating Assumptions General Description: List anything specifically that the Author wants relative to the operation of the configuration. Examples might be operational changes within the confines of the LO Schedule to maximize improvements to water supply or the environment, or both; specific high and low levels for Lake Okeechobee; maximize pulse discharges or modify timing to natural system; manage project features wet or dry.

RW - wet in wet periods; allowed to dry
SS - (allow to go dry) { configure shallow lakes, alligator holes
- to feed STAs A1 A2 STA3/4
perhaps feed Compartment B
include + STA 2
Shallow lake (below grade)

Other Key Elements: List the main Considerations that have not been mentioned elsewhere on this Form. Examples may include Water Supply in the Lake Okeechobee Service Area; deliver all available water to Florida Bay; Recreational Opportunities; etc.

clean

RW = to become pond apple slough!

Lake Okeechobee

Legend

EAA-Q/Q Measures

- SD — Storage - Deep Above Ground (Reservoir)
- SS — Storage - Shallow (Minor Impoundment)
- STA — Stormwater Treatment Areas (STA)
- OC — Operational Changes
- ASR — Aquifer Storage and Recovery (ASR) Systems
- RW — Restored Wetlands
- Flow Direction

Configuration Name: Keep
