

**Program Name: The Detector Dog Team program**

**Project Name:** Detector Dog Pilot Program

**Project ID:**

**Lead Agency** FWS Law Enforcement

**Strategic Plan Goal(s) Addressed:** 2B

**IES Framework Goal Addressed:**1

**Measurable Output(s):** Increase in amount of Cargo they inspect

**Project Synopsis:** The Detector Dog Team program was established to serve as an additional mechanism for pest detection occurring at mail/package service facilities in Florida. It has been well documented that dogs can be trained to detect plant materials in packages. This program will allow for the detection of plant pests that may accompany plant material in mail packages destined for Florida. Four detector dog teams have been deployed at mail/package distribution centers in Miami, Tampa and Orlando. In addition to using this technology at parcel hubs we will have dedicated canines to inspect at high risk areas for the presence of the giant African land snail (GALS) in Miami. Additionally FWS law enforcement use detector dogs in a pilot program and have had success in increasing the amount of cargo they are able to inspect.
